TOPIC #4 STREAM LIGHT FLASHLIGHTS

Survivor Model – Personal Flash Light

Each fire company is issued 8 Survivor flashlights and a 4-port charger. There are currently two models in use in the Cincinnati Fire Department with the main difference being the method in which the lights are turned on. The body of the lights are equipped with both a clasp and a ring allowing it to be secured to the fire coat. When not in service the flashlight should be placed in the charger. The charger is a “Quick Charge” and delivers a charge in about one hour.

Turning On: For models equipped with a toggle switch:
Slide the toggle switch on top of the light to turn off and on

For models with the push button switch:
Depress the pushbutton switch located on the body of the light.
From the “on” mode depress and hold the button for:
1 second to enter **Low** Mode
2 seconds to enter **Flash/Strobe** Mode
8 seconds to enter **Moonlight** Mode
An additional press of the button from any mode will turn the light off

If problems are discovered with these lights such as burned out bulbs or batteries not charging, they must be sent to Central Stores for repair and/or replacement. ***Company repairs must not be made on these lights.***

Knucklehead Model – Personal Flash Light

Each fire company is issued 1 Knucklehead flashlight that features an articulating and rotating head. The body of the light is equipped with both a clasp and a removable magnet allowing it to be secured to the fire coat or magnetically attached to metal objects. This model will fit in the 4 port chargers used for the standard Survivor flashlights.

Turning On: Depress the pushbutton switch located on the body of the light.
From the “on” mode depress and hold the button for:
1 second to enter **Low** Mode
2 seconds to enter **Flash/Strobe** Mode
8 seconds to enter **Moonlight** Mode
An additional press of the button from any mode will turn the light off

If problems are discovered with these lights such as burned out bulbs or batteries not charging, they must be sent to Central Stores for repair and/or replacement. ***Company repairs must not be made on these lights.***

FIREBOX or LITEBOX Rechargeable Lantern

The Stream Light Firebox and the Stream Light Litebox are issued to R.A.T. Companies and companies that are using the newest E-One apparatus.

Note: Not all companies have one of these lights.

Turning On: On / Off toggle switch: (the FireBox models have a flashing LED feature on the rear of the light, on those models there is a 3-way on/off switch)

RAT Companies are issued two of these lights. They are useful in two ways. One light can be carried to the point of rescue and when entering the building, the 2nd light can be left at the entrance, shining in the building to allow illumination to the point of egress.

ON the FireBox, the FLASHING function is especially useful to attract attention if in trouble or to mark an exit during Wide Area Search.

These lights can be set on a surface and the multi-directional head can be rotated to provide lighting on accident scenes, EMS responses, during salvage/overhaul work or whatever situation you are faced with.
